NEW MEDIA THEORY AND PRACTICE

Course Objectives:

• With the world communicating increasingly using mobile devices, it is time that media students gear up to face the challenge of creating content for digital media devices. It is no more enough to simply write a good copy; it is equally important that media students become technically competent enough to create content for all possible media – print, television, radio, the Internet, and mobile devices. One should understand that though the story remains the same, the presentation for each of these media differs and with the industry expecting the moon from you, you need to be multi-tasking individuals, especially in terms of being able to use digital technology well, both, as users/consumers and as creators.

Before we study how to create content, however, we must be conversant with how new media has developed and what the

social, political and economic effects that the new media technologies have brought about, and what could be their future repercussions. The salience of theory is in the fact that it is theory that helps us to understand a phenomenon and how we can deal with it while putting into practice the tools we learn to create content. It is expected that you read up before attending lectures.
